Main loop

```
while (1) {
    if(command=='F') { Move_Forword(); }
    else if(command=='R') { Turn_Right(); }
    else if(command=='L') { Turn_Left(); }
    else if(command=='S') { Reset_Position(); }
}
```

機構

電路

Decoding UART Package

```
void HAL_UART_RxCpltCallback(UART_HandleTypeDef *huart) {
      if(huart->Instance==USART2) {
             if(str1[6]=='E') {
                   command = str1[0]; speed = str1[1];
                   angle1 = (int)str1[2]; angle2 = (int)str1[3];
                   angle3 = (int)str1[4]; clip = str1[5];
              HAL_UART_Receive_IT(&huart2,str1,7);
             //Enable rx interrupt every time
```

setAngle

```
void setAngle(uint8_t num, uint8_t angle){
   int pulse_wide, analog_value;

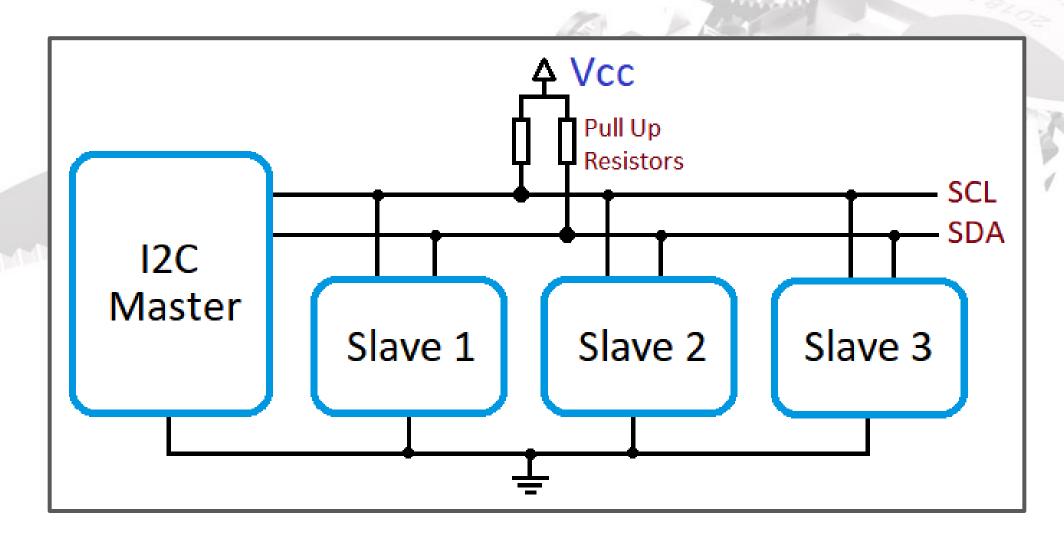

pulse_wide = map(angle, 0, 180, MIN_PULSE_WIDTH, MAX_PULSE_WIDTH);
   analog_value = (int)((float)(pulse_wide) / 10000000 * 50 * 4096);
   setPWM(num, 0, analog_value);
```

setPWM - I²C

setPWM

```
void setPWM(uint8_t num, uint16_t on, uint16_t off) {
      uint8_tdata_buf[]={on,(on>>8),off,(off>>8)};
      I2C_WRITE_buf(LED0_ON_L+4*(num), data_buf,4);
```

	Slave address	Control register	Data for register	程式
1	A5:A0	D7:D0	D7:D0
